NoAr graphics review

Branch: claude/branch-review-opz967
Implementation through 7f51b4df · 2026-11-07

- Fresh installation: only one removable Logo example.
- Authored names/groups, optional channel assignments and template deletion.
- Shape primitives, live clock, uploaded fonts and CSV/RSS/JSON field mappings.
- 708 Rust tests and 31 browser tests passed. Actual CSV/HLS updates, failure retention, manual records and backend restart were observed.
- 76 legacy HTTP responses and both XMLTV cases match released 2.2.1. 1,000 pre-encode frames match byte for byte; aligned HLS meets the fixed compression limits.

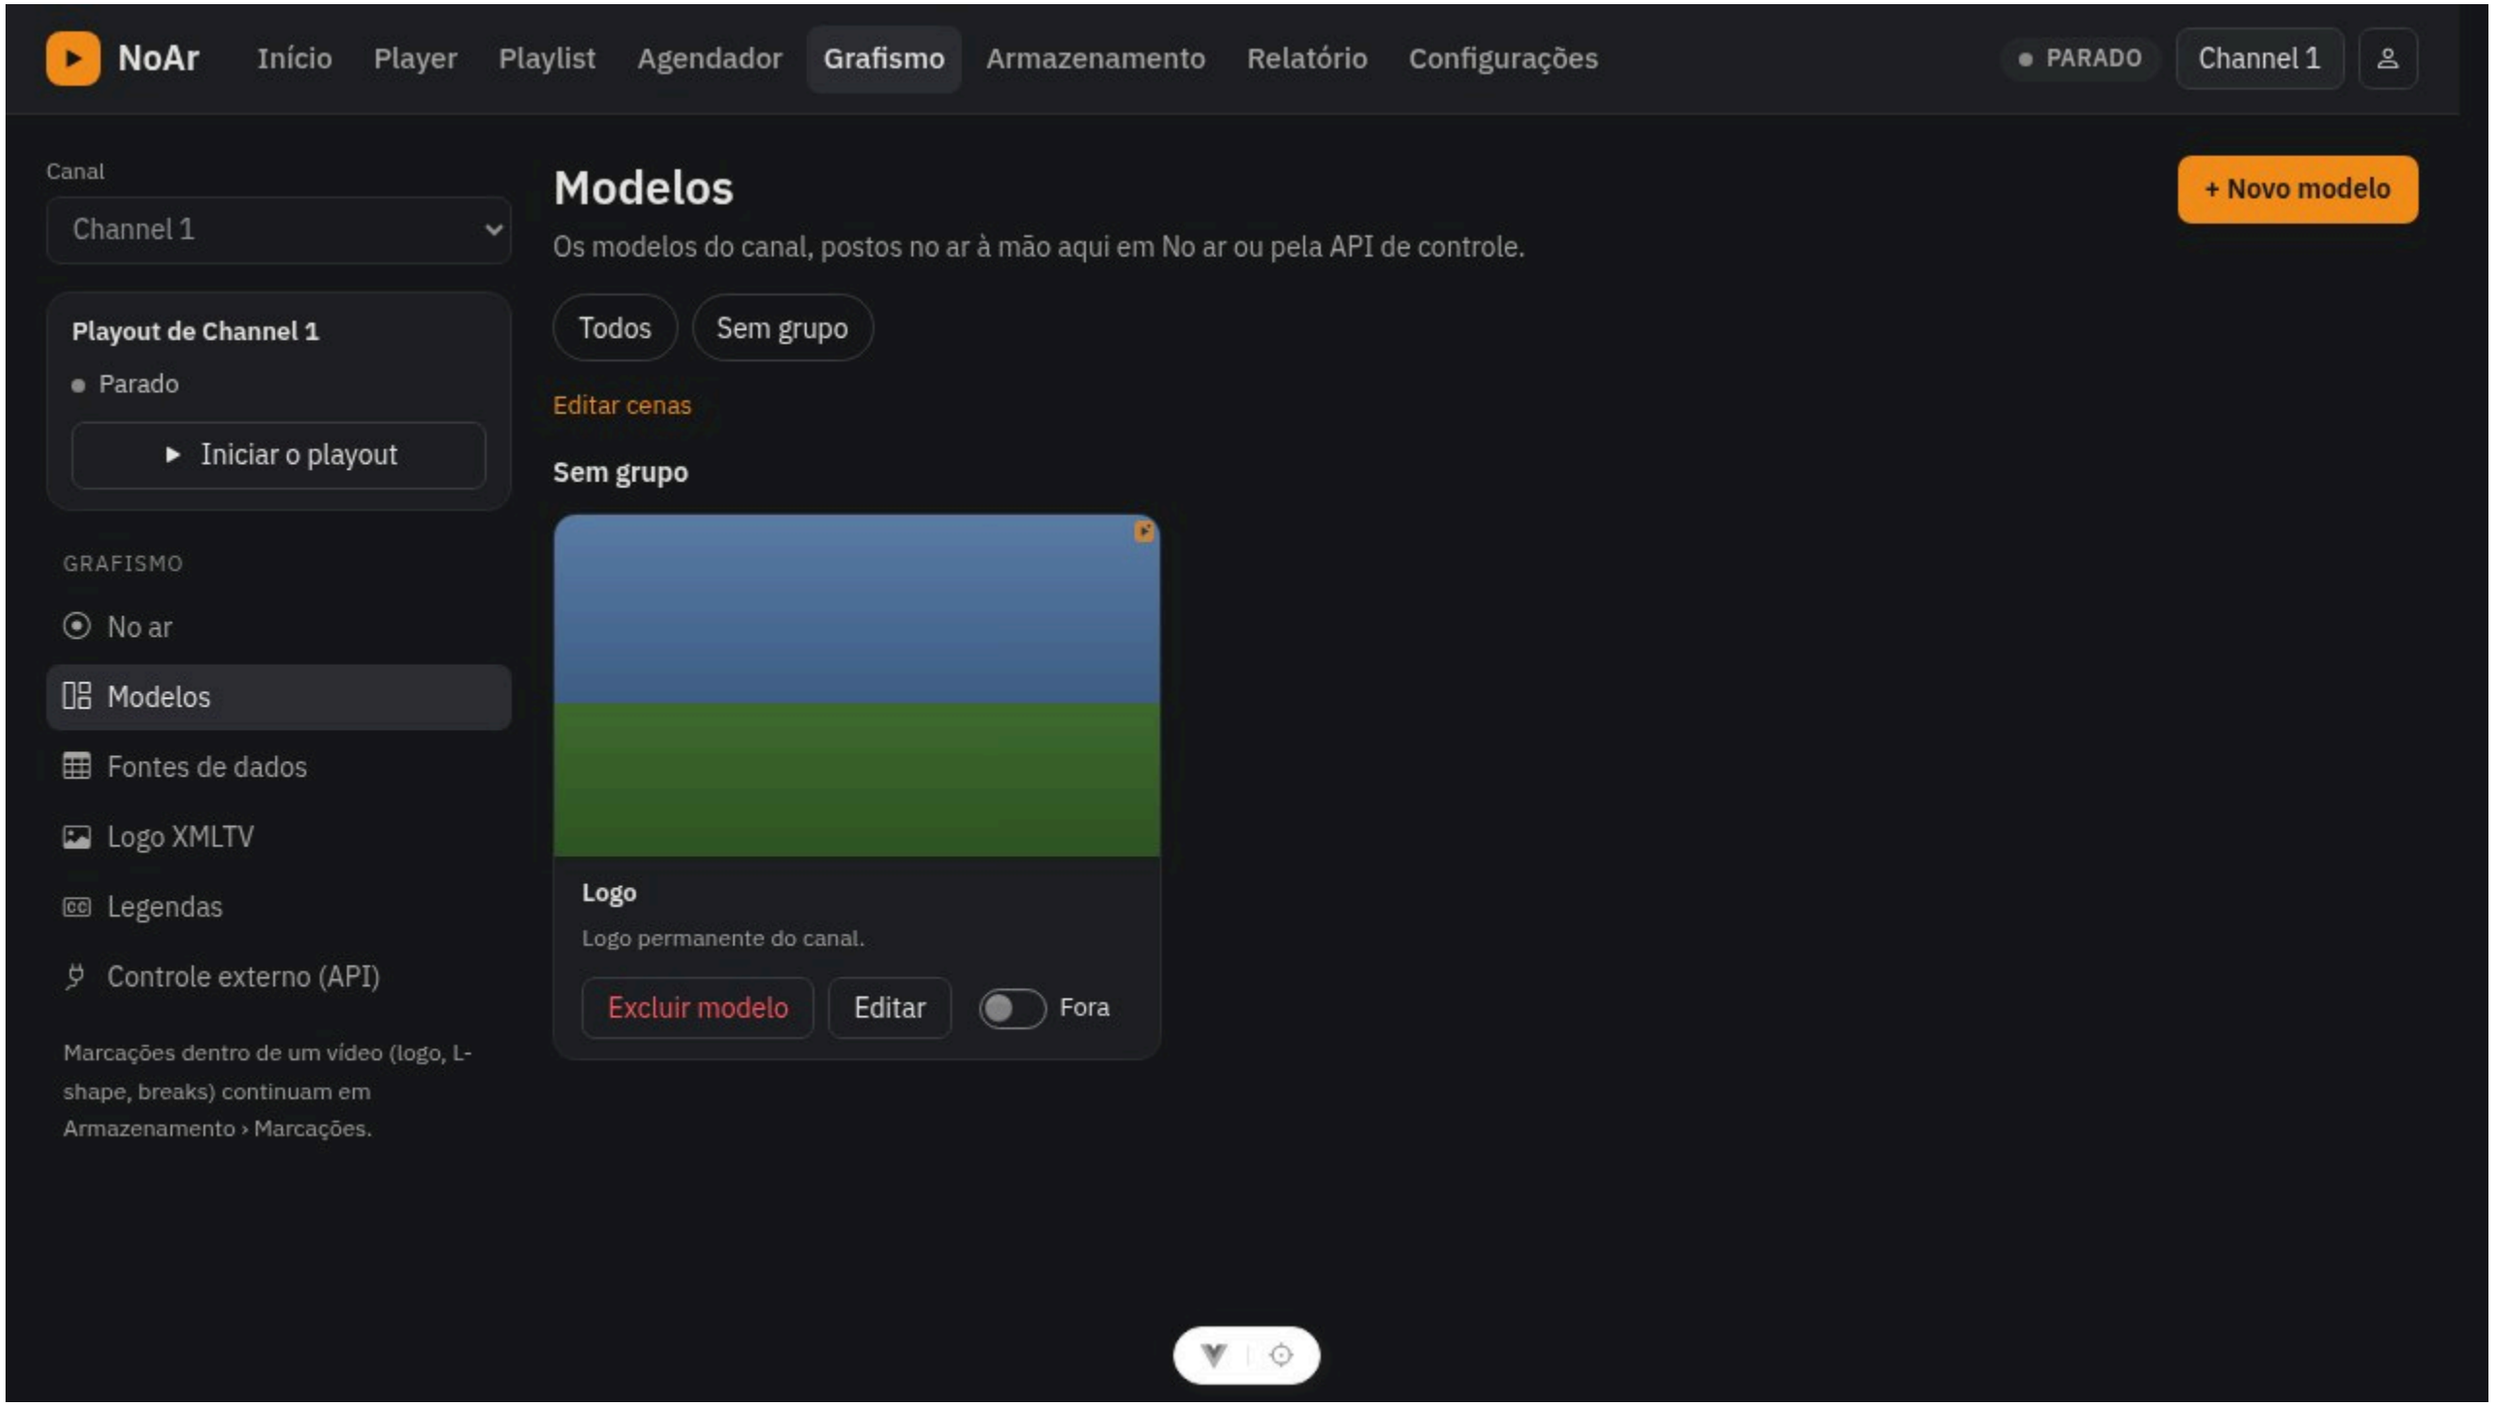

These screenshots use disposable accounts and synthetic artwork/video. The gray Program image is the actual test video; the blue/green Composer background is an authoring aid. Additional compositions were authored after the first-run checks.

External RSS/JSON providers were not validated: cloud DNS failed. Parsers and bounded local HTTP fixtures passed; CSV runtime has separate output evidence. Private Sheets OAuth is outside this delivery.

Each following page preserves a full screenshot. Individual JPEG files and machine-readable evidence remain beside this gallery in docs/graphics-handoff.
